Supervisory Patent Examiner, Art Unit 2618			

Continuation of 3. NOTE: Claim amendments for claims 1 & 7 raise new issues and would require further search..

Continuation of 11. does NOT place the application in condition for allowance because: In response to the applicant's argument that Nee fails to teach the changing of channel implies a receiving a signal, the examiner respectfully disagrees. There is in fact a reason that when a user was to change a channel of course the receiver would need to asses that signal in order to receive it, this is why it is obvious that when a user of the Nee invention is to change a channel the receiver would need to see if it is received or not, the fact that a signal is received by Nee proves that the receiver checked the signal to receive it. In response to the applicant's argument that Acker fails to teach or suggest a broadcasting wave which includes digital video signal, a digital audio signal and a service information including channel number, transmission broadcasting station name, and broadcast target area, again the examiner respectfully disagrees. Acker explicitly teaches audio and video and service information, furthermore Acker states that a channel number (figures 7 & 8) along with a station name 'rock' (figure 8) and a broadcast target area information 'Ethel xL' as shown again in figure 8, all are explicitly taught by the Acker reference. In response to the applicant's arguments that a broadcast channel is different from a broadcast wave the examiner responds that channel inherently requires a wave, be it wireless or otherwise that carries the data through a medium. Lastly in response to the applicant's argument that Acker fails to teach information pertaining to the broadcast wave itself the examiner respectfully disagrees that the strength indication as taught by the bars of Acker figure 8 teach this broadcast wave self-information, that is inherently a wave, or channel has a strength associated therewith.
